## About Our Company

Cross Engineering specialise in heavy and general welding and fabrication, in addition to supplying steel and fencing supplies for the agriculture, oil and gas, energy, water, local and state government, civil construction and transport sectors.

Operating throughout Queensland and across northern New South Wales, we have developed a reputation for quality and responsiveness, coupled with practical, robust and well-managed solutions. Cross Engineering has the flexibility to provide customers with either onsite or workshop solutions, from its fully equipped workshop in St George, south-west Queensland.

## Our Clients & Track Record

Cross Engineering has a hands-on management approach with the Director, Andrew Cross overseeing fabrication and welding projects. Cross Engineering has built strong relationships with clients through excellent understanding of client needs, communication and quality workmanship, which ensures ongoing repeat business. Examples of past experience include:

### Agriculture

Cotton gin maintenance and shutdown

Installation of pumps and pipes, and ongoing maintenance at Dirranbandi and St George irrigation properties

### Government

Fabrication, maintenance and repairs to machinery, equipment and plant

Maintenance, repairs and modification to plant, machinery and earth moving equipment, fabrication of civil and recreation area steel products, water and sewerage repair, fabrication and maintenance

### Resource Sector

Maintenance, repairs and modifications to machinery and equipment

In addition to these projects, Cross Engineering services to private clients include:

- Industrial building fabrication, including steel frame shed fabrication
- Ongoing trailer and quarry machinery maintenance
- Fabrication, repairs, installation and modification to Earthmoving, Farming and Transport Equipment, and light and heavy machinery
- Fabrication and installation of water supply pipe work, pump stations and tank frames
- Industrial equipment maintenance and shutdowns

Cross Engineering can provide a quick response service to meet urgent work priorities, including on call service, if required. We also work with an established and trusted network of subcontractors, ensuring jobs are managed safely and efficiently from start to finish.

### *Equipment and resources*

Cross Engineering has a fully equipped workshop, a separate 1,070 square meter shed for steel and fencing supplies, an additional three acres of land and capacity to turn semitrailers. The workshop is equipped with:

- 8 welding stations
- 110 tonne press break
- Four meter guillotine with 4mm cutting capacity
- Pipe/RHS bender
- 23 foot Scissor lift
- Drill press
- 60 tonne Press
- Tig and mig welders

We also have a fleet of three mobile welding units designed for quick and flexible onsite solutions, in addition to a trailer for delivery purposes and mobile unit transportation.

Cross Engineering has built an extensive range of steel and fencing supplies for rural, industrial, commercial and domestic requirements. Our steel shed is equipped with:

- Sheet, plate and reinforcing steel
- Downgrade steel
- Gates and panels
- Pipe, RHS, SHS, rod, aluminium pool fencing
- A range of Gate Accessories
- Welding consumables including grinding discs, cutting discs, protective gear and paint
